

UDS Clinical Action Areas Brief

Turn UDS data into analysis your team can act on.

Structured UDS analysis, peer benchmarking, prioritization, and decision support for Community Health Centers and look-alikes.

WHAT IS UDS?

UDS stands for **Uniform Data System**. Health Center Program awardees and look-alikes report UDS data once a year, including clinical quality-of-care and health outcome measures. This case study focuses on how those annual clinical results can be turned into a clearer starting point for internal review and follow-up.

CHALLENGE

Community Health Centers report UDS data annually, but leadership may still lack an objective, standardized way to determine which measures warrant attention first, particularly when clinical and operational priorities are competing for limited time and resources.

SOLUTION

DOMAS developed a standardized analytical framework and leadership-ready reporting product that combines the selected comparison, state and national peer context, action categories, action rankings, and data-quality prompts. Site-level analysis can be added when local follow-up is needed.

HOW THE REPORTING PRODUCT WORKS

1. Select the analytical need

2024 vs. 2025 Public UDS Analysis

For year-over-year review across the two most recent public reporting cycles.

2025 Public Baseline vs. Submitted Internal Values

For comparing current or interim values with the latest public baseline before the next public cycle is available.

2. Identify what warrants closer review

Evaluate the selected comparison alongside peer context and data-quality signals to identify which measures may warrant closer review and where follow-up may be useful.

3. Receive a standardized view

Give leadership an objective, data-driven view of the findings in a consistent format that supports discussion, validation, and next-step planning.

**The value is not in repackaging UDS data.
It is in the analysis that helps teams focus review and support decision-making.**

WHAT THIS CASE STUDY DEMONSTRATES

- Turning a large set of annual reporting results into a clearer, standardized review.
- Using public peer context and organization-submitted values when applicable.
- Flagging values that should be checked before they are interpreted.
- Providing a presentation-ready leadership resource without adding another dashboard, subscription, or recurring meeting.

ABOUT THE SAMPLE

The sample uses a **fictional health center** and contains no real client data. It demonstrates the **Organization + Site-Level Edition** using the **2025 Public UDS Baseline vs. Submitted Internal Values** comparison, with fictional 2026 YTD values as the submitted period.

Other product configurations may include a subset of the views shown.
